

Healthy Calories vs Empty Calories

When we eat, we consume **calories**.
A calorie is the **amount of energy in food** – the **more calories** in the food we eat, the **more energy** our bodies take in.

Our bodies **burn calories** all the time, especially when we're **active**. Calories that we don't burn through **physical activity** are stored as **fat**.

How many calories does your body  burn in 30 minutes?

Junk foods like soda and chips are filled with **empty calories** that don't have the nutrition our bodies need.

Healthy Choices

= 250 HEALTHY calories

Unhealthy Choices

= 700 EMPTY calories

If you regularly **take in more calories than you burn off**, your body is likely to **gain weight**.
